

Marius Mihail Ion

Senior Angular / Frontend Engineer | Enterprise Product Frontend

Zaragoza, Spain | mihailmariusion@gmail.com | +34 662 439 252 | linkedin.com/in/mariusdev | github.com/mihailmariusiondev

EU Citizen: authorized to work across the EU/EEA without sponsorship

Permanent or B2B | Remote-first international | Open to relocation, with sponsorship outside the EU

PROFESSIONAL SUMMARY

Software developer since 2018, specialized in Angular since 2021. Enterprise front-ends for global e-commerce (Zara Home, Inditex), banking (Santander) and online education (UNIR). Scored in the **top 1.42%** of candidates on an independent Angular assessment. Strongest on complex product frontends: architecture, performance, accessibility and quality automation. Full-stack .NET/C# origin (2018–2020) that still pays off when negotiating API contracts, auth and security. Native Spanish and Romanian. Professional English.

TECHNICAL SKILLS

Angular Signals, Standalone Components, SSR, lazy loading, TypeScript, RxJS, NgRx, Angular Material/CDK, feature flags

Product Frontend SCSS/SASS, responsive design, WCAG 2.1 AA accessibility, i18n (Transloco), web performance

Testing & Quality Jest, Karma/Jasmine, SonarQube/SonarCloud, ESLint, Prettier, systematic PR review

APIs & Delivery REST, OpenAPI/Swagger, OAuth 2.0, JWT, HTTP interceptors, WebRTC, AWS serverless services (Lambda, Cognito, API Gateway, S3), GitHub Actions, Git/GitHub, Jira, Figma, Agile/Scrum

Engineering Controls OpenAI Realtime API (WebRTC voice + text), prompt & context engineering, automated review controls.

EXPERIENCE

Decskill España • Client: Zara Home (Inditex)

Senior Front-End Analyst (Angular)

Zaragoza, Spain

May 2025 – July 2026

Zara Home: global e-commerce platform, multi-tenant, multi-market

- Built the Angular frontend of Zara Home's AI shopping assistant: real-time voice and text over WebRTC, wired to a catalog of backend tools. Released to production behind a feature flag as a controlled pilot.
- Cut LLM cost with a router pattern and context stripping: tool payloads dropped from 570 KB to 22 KB per execution (**96% reduction**)
- Delivered a conversational Help Center that replaced legacy shopping guides in production, rolled out market by market with SSR-safe Angular integration, localized routes and accessibility preserved throughout the release
- Built an automated PR-review system connected to GitHub, with domain-specific checks, that surfaced injection, authorization and secrets-management defects before merge. I then measured it against its own output rather than trusting it, **retiring 21 of its 53 rules** once the data showed the team was ignoring them
- Audited a 19 MB JavaScript bundle, **identified 3.4 MB** of removable weight and shipped the reductions in two merged PRs: dynamic imports for hls.js and html2canvas, lodash-es removed, and a luxon-to-native-Date migration
- Investigated and formally escalated production and security findings, documenting each with runtime evidence for the owning teams and driving confirmed issues through review
- Delivered the account-area migration to passwordless (OTP) authentication: designed dual-path UX driven by hasPassword, with OTP flows for email change and password creation, validated end-to-end on the pre-integration environment across four documented scenarios
- Closed 34 WCAG 2.1 AA findings from a formal accessibility audit: heading hierarchy site-wide, keyboard navigation, ARIA semantics and focus management
- Built internal developer tooling adopted outside my own team: a Teams messaging CLI merged into Inditex's shared engineering repository, and a documentation MCP server I curated and deployed on the internal platform, taken up by the Android platform team
- Wrote the iOS integration guide (architecture, SDK contract, tool catalog) used by the native team to port the assistant to the Zara Home app

Avanade Spain • Client: UNIR

Senior Front-End Analyst (Angular)

Remote, Spain

March 2024 – May 2025

UNIR: online university in Spain. "Mateo": administrative back-office for student management

- Acted as the hands-on frontend technical reference, guiding Angular architecture, component design and code-quality decisions across the team
- Defined the core architecture: authentication flows, admin UI, centralized permissions and navigation
- Worked within an Nx monorepo and refactored the Admissions module, removing circular dependencies and centralizing permissions logic
- Introduced linting, formatting and unit testing to a back-office that had none, plus review protocols and quality gates
- Mentored the team on Angular practices and ran SonarQube analysis sessions
- Awarded **Inspire Greatness** recognition for dedication and professionalism (August 2024)

Vermont Solutions (Viewnext / IBM) · Client: Santander

Senior Front-End Developer (Angular)

Madrid, Spain

December 2022 – March 2024

Santander: banking applications for transaction monitoring, employee management and real estate operations

- Senior Angular reference across three concurrent banking applications, leading day-to-day delivery with the backend, design and Scrum teams
- Led a team of 5 on an internal mobile banking app (employees managing their own transactions and cards), and was the senior technical reference for a team of 4 on Santander's internal real-estate portal
- Built a transaction-monitoring dashboard with Chart.js (bar and donut charts) and gesture interactions with HammerJS. On one project, I owned around 80% of the front-end implementation
- Implemented Figma designs as Angular components on Santander's internal frontend platform: Flame design system, NgDarwin security/logging libraries, Storybook and Nexus for internal packages
- Kept quality high with systematic unit testing (Karma, Jasmine) and static analysis (SonarQube, ESLint, Fortify), paying down technical debt along the way

CloudAPPi

Mid-Level Front-End Developer (Angular, React)

Madrid, Spain

October – December 2022

Two-month contract for the Regional Government of Madrid.

- Built authentication flows and incremental improvements on **Madrid Digital**, a legacy Angular 8 monolith (Angular Material, RxJS)
- Also contributed to a React project (ReactJS 17, Redux Toolkit, Material UI)

ENZO (Rent & Buy S.A.)

Mid-Level Front-End Developer (Angular)

Madrid, Spain

September 2021 – October 2022

Small company serving an international agricultural client on an AWS serverless stack. This is where I moved from .NET into Angular and cloud development.

- Built reusable Angular components against a serverless AWS backend (Lambda, API Gateway, S3, CloudFront, SQS/SNS) and authentication flows with AWS Cognito
- Onboarded new team members on architecture and Angular practices, and joined English-language client meetings and requirement gathering

Earlier Experience *Before specializing in Angular in 2021: full-stack .NET roles (2018 – 2020) and a career break with personal projects and training.*

- **Independent Projects & Upskilling** · WordPress development (themes, plugins, SEO), Office automation tooling and structured frontend upskilling, June 2020 – September 2021
- **Altran (Capgemini)** · Mid-Level Full Stack Developer (.NET), March – June 2020
- **IO Digital (Query Software)** · Mid-Level Full Stack Developer (.NET), November 2018 – September 2019
- **STRATESYS** · Junior Full Stack Developer (.NET), July – November 2018

CERTIFICATIONS & EDUCATION

Angular Certified Developer · Angular Training (expired December 2025)	December 2022
Angular assessment: 95% score, top 1.42% of all candidates · SkillValue	September 2022
English Proficiency Test, C2 · goFLUENT	March 2025
Green Software for Practitioners · Linux Foundation + Green Software Foundation	2025
Higher Technician in Multi-platform Applications Development · Joyfe College, Madrid	2017 – 2018

LANGUAGES

Spanish: Native | **Romanian:** Native | **English:** Professional working proficiency, with a goFLUENT C2 assessment (2025)

RECOGNITION

“Working with Marius has been a real pleasure. I especially highlight his initiative with AI tools applied to development, from which I learned a great deal working side by side with him. Any team would be more than fortunate to count on someone with his technical level and his attitude. (Translated from Spanish.)”

Juan Pablo Romero Pereira, Frontend Developer, Zara Home (Inditex)

“His knowledge of Angular is excellent, but what I really highlight is his willingness to help and share his experience. He not only applies good practices in his daily work, but promotes their adoption within the team. (Translated from Spanish.)”

José Luis Murcia Gámez, Frontend Developer, UNIR project (Avanade)

“Marius proved to be a highly adaptable and resourceful programmer on both occasions we worked together, at Stratesys and at Avanade. His ability to learn quickly and his contribution to the projects were fundamental. (Translated from Spanish.)”

José Luis Rodríguez-Campra Camberos, BAU Coordinator / Scrum Master
